

Senior Researcher Process Technology

For one of our clients we are looking for a Senior Researcher Process Technology.

The responsibilities of a Researcher include:

- Exploring alternative & novel technologies and process concepts, involving experimental programs
- Looking beyond the horizon, to identify and use the most appropriate technology to meet given project challenges
- Putting safety first and carrying out safety assessments
- Working with pace and scientific rigour in interpretation and analysis of experimental data, modelling results, deducing insights and recommending for further work
- Explaining, presenting and reporting project results
- Defining project proposals

We are looking for candidates who:

- Are educated in Chemical Technology-Process Technology (PhD, PDEng or MSc.)
- Being a good overall process engineer with R&D experience preferably having developed an expertise in certain areas
- Can carry out and lead projects, work collaboratively across boundaries
- Are good communicators and build trustful relations with internal colleagues and external contacts
- Dare to think differently and continuously strive to improve themselves

We offer you a challenging position in a dynamic international organization that is moving forward.

If you have any remaining questions regarding this vacancy, please do not hesitate to contact Saskia Stoop, adviseur W&S at 026 3703757. We are pleased to answer your questions.
